1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim's 1-4 and 15-20, are drawn to two scene change detectors to determine where I-frames are inserted, classified in class 375, subclass 240.26.
  - II. Claim's 5-9 and 10-13, are drawn to bit allocation based on full GOPs, classified in class 375, subclass 240.03.
  - III. Claim 14, is drawn to comparison of encoding techniques, classified in class 375, subclass 240.01.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as being used with non-scene change detectors or without full GOPs. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
